

DARKTOWER

CYBER SOLUTIONS &
THREAT INTELLIGENCE

STRENGTHEN YOUR DEFENSE

DarkTower is a global advisory firm focused on security for some of the world's leading organizations. Our security services, along with real-world expertise, help to proactively defend clients against the ever-changing threat landscape across their enterprise.

DarkTower's intelligence-driven solutions operate across three key areas: Threat Intelligence, Financial Crime, and Cyber Engineering.

Our cybersecurity solutions and services protect and empower leading security-conscious firms within both the public and private sectors including financial services, energy, healthcare, social media, law enforcement, and the federal government.

Our proprietary intelligence products are also leveraged by the CIA, FBI, NSA, DHS, ICE/HSI, USSS, and DoD. Discover how our intelligence-driven solutions can transform your organization to achieve stronger, smarter, and more agile lines of cyber defense.

FINANCIAL CRIME

Detecting and preventing financial crime is one of the biggest challenges facing businesses. As bad actors continue to evolve their tactics and utilize new technologies like faster payments, biometrics, and alternative payment systems, our integrated approach of both intelligence and analytics tools helps our clients effectively address financial crime risk and protect against new and emerging threats.

Our team offers a breadth of investigative and regulatory experience from financial services and cybersecurity groups, enabling our clients to identify, report, and protect against fraud, AML, and other financial cybercrime. DarkTower partners with clients by co-developing and tuning rules and strategies before combining them with actionable intelligence and analytics. We help today's leading organizations shift their operations from a reactive posture to a more proactive stance, and helping them manage risk while achieving their growth goals.

DarkTower's financial crime solutions and services drive measurable results, including significant reductions in financial loss and regulatory risk, and help to improve your operational return on investment.

THREAT INTELLIGENCE

DarkTower's Threat Intelligence services deliver the insights our clients require so their organizations can proactively protect themselves against evolving attacks. Extend your team through our state-of-the-art computer forensics laboratory and seasoned analysts delivering curated, actionable intelligence and analysis for decision makers and network defenders.

Our multiple layers of intelligence, vetted by industry experts, provides our clients with targeted intelligence to build processes and solutions within their security operations. While artificial intelligence and technology-centric solutions can provide value at the macro level, our human-centric approach focuses on identifying specific threats to your unique industry and organization from multiple sources across the globe including Deep/Dark Web, SIGINT, HUMINT and OSINT.

These actionable strategies support leading organizations to defend and protect against phishing, malware, ransomware, nation state actors, insider threats, and more. Our proprietary methods have been successfully utilized by the CIA, FBI, NSA, DHS, ICE/HSI, USSS, DoD, state and local law enforcement, as well as industry leaders in social media, technology, financial services, energy, and healthcare.

of top intelligence and cyber talent.

CYBER ENGINEERING

Cybersecurity threats can penetrate your perimeter defenses and infiltrate your core network through multiple vectors. When they do, a properly engineered defense-in-depth strategy is critical to defending and protecting your core services and data infrastructure.

Our Cyber Engineering experts bring decades of experience in defending Fortune 500 companies, U.S. Government, and U.S. Military against these threats. Leverage our expertise to ensure that your most critical assets are protected.
